

Practical No. 15: Develop a Webpage for Implementing Statusbar and Webpage Protection.

```
<html>
<script>
function fun1(text)
{
window.status = text;
}
</script>
<body>
<a href="MACOSX"onmouseover="fun1('This is Apple');">
MACOSX
</a>
<br><br><a href="Windows" onmouseover="fun1('This is Windows');">
Windows
</a>
</body>
</html>
```
